SKILL – 2

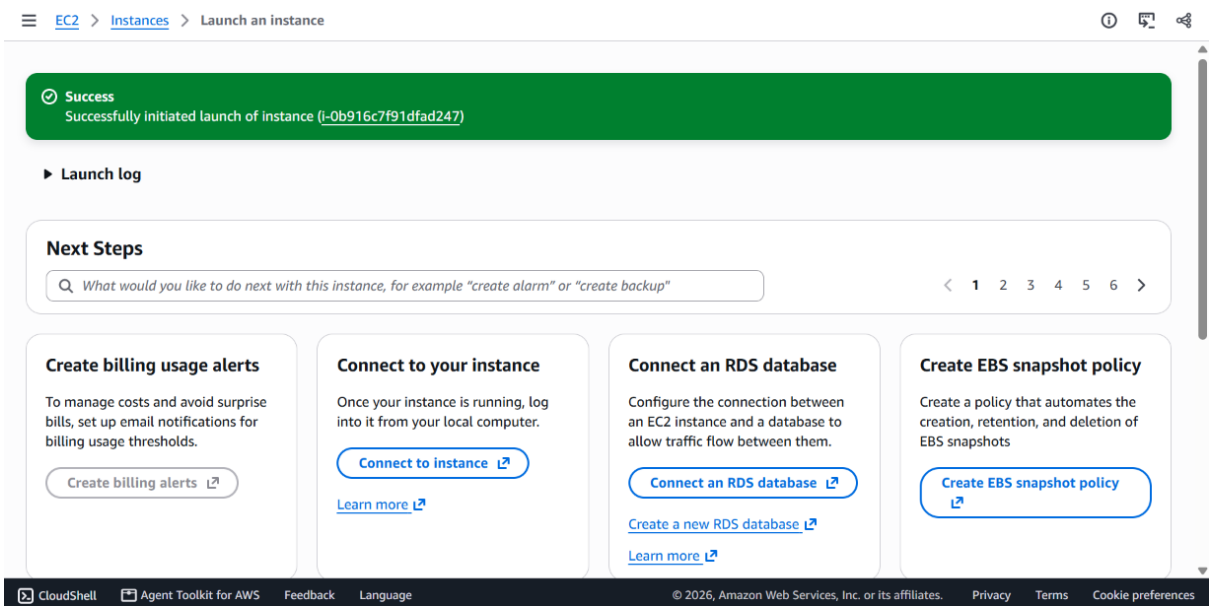

Creating a new instance :-

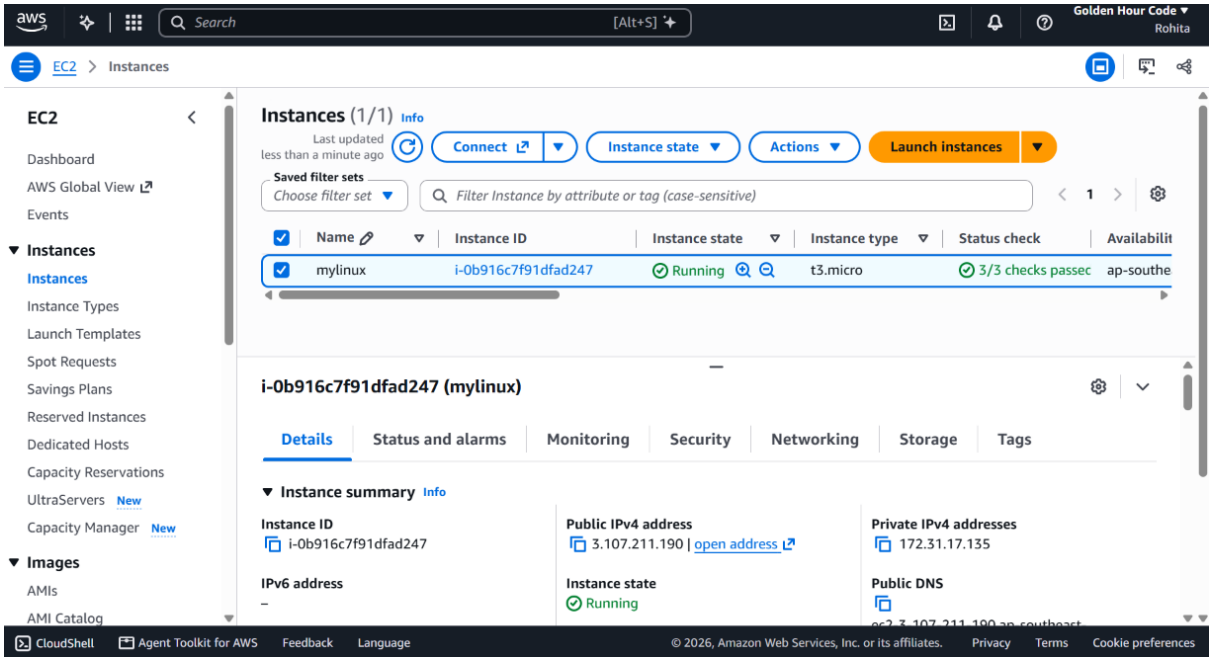

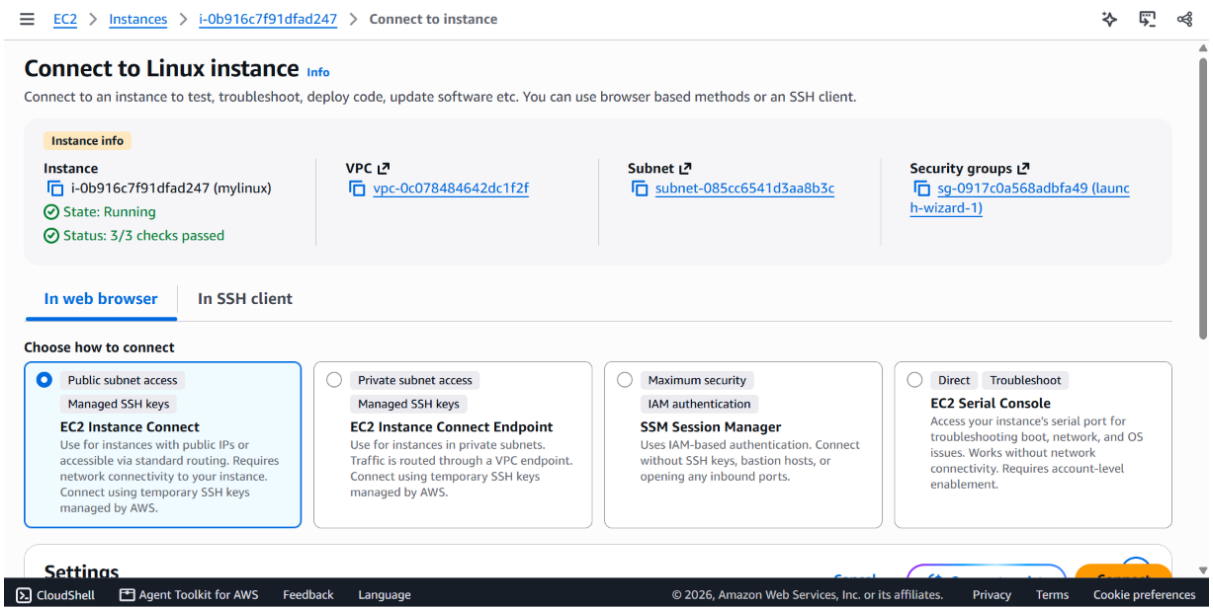

EC2 > Instances > Launch an instance
Amazon EC2 allows you to create virtual machines, or instances, that run on the AWS Cloud. Quickly get started by following the simple steps below.
Name and tags Info
Name
e.g. My Web Server
Add additional tags
Application and OS Images (Amazon Machine Image) Info
An AMI contains the operating system, application server, and applications for your instance. If you don't see a suitable AMI below, use the search field or choose Browse more AMIs.
Search our full catalog including 1000s of application and OS images
Quick Start
Amazon Linux
macOS
Ubuntu
Windows
Red Hat
SUSE I

Create key pair
Key pair name
Key pairs allow you to connect to your instance securely.
linuxkey1
The name can include up to 255 ASCII characters. It can't include leading or trailing spaces.
Key pair type
RSA
RSA encrypted private and public key pair
ED25519
ED25519 encrypted private and public key pair
Private key file format
.pem
For use with OpenSSH
.ppk
For use with PuTTY
When prompted, store the private key in a secure and accessible location on your computer. You will need it later to connect to your instance. Learn
Cancel

EC2 > Instances > Launch an instance
Success
Successfully initiated launch of instance (i-0b916c7f91dfad247)
Launch log
Next Steps
What would you like to do next with this instance, for example "create alarm" or "create backup"
1 2 3 4 5 6
Create billing usage alerts
To manage costs and avoid surprise bills, set up email notifications for billing usage thresholds.
Create billing alerts
Connect to your instance
Once your instance is running, log into it from your local computer.
Connect to instance
Learn more
Connect an RDS database
Configure the connection between an EC2 instance and a database to allow traffic flow between them.
Connect an RDS database
Create a new RDS database

1. **Login to AWS Management Console.**
2. **Search and open EC2.**
3. **Click Launch Instance.**
4. **Enter the instance name.**
5. **Select an Amazon Machine Image (AMI).**
6. **Choose an instance type (e.g., t2.micro).**
7. **Create and download a key pair.**
8. **Configure network settings.**
9. **Configure storage.**

10. Review all configurations.

11. Click Launch Instance.

12. Check that the instance status is Running.
